SBS CyberSecurity | NETWORK SECURITY AUDIT

Get A Better Plan Of Attack

You can never truly know the strength of your network's security until you put it to the ultimate test. Backed by a team of experts with years' of industry experience, SBS CyberSecurity has one of the most comprehensive audits on the market – the SBS Network Security Audit.

The SBS Network Security Audit is a strategic combination of testing services that simulates a real-world attack scenario, providing you with a thorough assessment of your network security.

The Process

- An SBS industry expert, with extensive knowledge of the regulations and security issues faced by your organization, will execute your testing.
- Following your audit, our experienced consultants are available to provide expert guidance to help determine the most important and appropriate steps needed in addressing results.
- Easy-to-read, management-ready reports are provided and include audit results and recommendations to mitigate risks.
- Automate your remediation action plan with complimentary access to the TRAC™ Action Tracking module.

The Network Security Audit includes the following assessments:

- White-Box External Network Penetration Test
- External Vulnerability Assessment
- Internal Network Penetration Test
- Internal Vulnerability Assessment
- Social Engineering - Phishing Assessment and Telephone Impersonation
- Firewall Configuration Review
- Remote Access Review
- Email and Spam Filtering System Review
- Internal Network Security Posture Review

"SBS is really good at what they do! Whether your business utilizes them for IT testing, auditing, or their incredible TRAC program, SBS receives an A+ from our bank. They have the tools and work ethic to ensure your exams go smoothly. SBS is simply as good as it gets!" *-Andrew Schmidt, Farmers and Merchants Bank*

Individual Services

If the full Network Security Audit is not what you're looking for, SBS CyberSecurity can provide your organization with these individual, yet comprehensive, services to give you a complete picture of your strengths and vulnerabilities.

Vulnerability Assessment

Vulnerability Assessment from SBS is a remote, automated process that scans the organization's network for the most current critical vulnerabilities.

Penetration Testing

Penetration Testing is the process of working from outside your organization's network to discover, actively exploit, and report vulnerabilities that affect the confidentiality, integrity, and availability of your IT systems.

Social Engineering

Social Engineering is to train and educate your employees to be the first line of defense through a variety of real-world techniques, mimicking the way hackers are currently targeting organizations.
